Tremblay, R.
MICROWAVE PHASE SHIFTER WITH DIELECTRIC PRISMS. [1961] [13]p. 14 refs.
Order from SLA $1.60 62-10622

Trans. of Canadian Journal of Physics, 1961, v. 39, p. 409-418.

DESCRIPTORS: *Microwave equipment, *Phase shifters, Dielectrics, Prisms (Optics).

A new type of microwave phase shifter was constructed, which has line sections of variable length. In this device, a dielectric plate with parallel faces passes through two longitudinal slits on the larger faces of a rectangular waveguide. This plate is formed of two identical prisms placed in opposition. The displacement of one of the prisms relative to the other along the hypothenuse changes the effective length of the dielectric plate within the guide, with a (Engineering--Electronic, TT, v. 8, no. 9) (over)

consequent shift of the wave that traverses this quadrupole. The possibility of designing a phase shifter of this type using only a single prism is also discussed. The characteristics of this type of variable phase shifter are as follows: high phase resolution, 0.7°; easy matching, S. W. R. of 1.05; weak sensitivity to frequency variations; phase shift linear with respect to the displacement of one of the prisms; and very simple mechanical construction. (Author)
